

■ Description

Individual protection system which provides an anchoring point above workers, enabling them to safely carry out tasks to place: boards, guardrails, safety netting, formwork risers and all situations in general related to formwork assembly entailing the risk of falls from heights. Significantly increases the protection of workers on site, acting as a complement to collective protection.

■ Components and accessories

- Alsipercha.
- Housing tube.
- Hook.
- Leveling.r
- 2 m and 3 m tripod.
- Sling.
- HEB column clamp.
- Retractable.
- Harness.
- Harness extension.

■ Compatible

- Slab formwork systems.
- Collective protection products.

■ Properties

- 4.5 m high steel structure that is inserted into a housing tube previously installed in the column and which significantly increases protection on site, complemented by collective protection systems.
- Easy to assemble and use, does not require outside installers.
- Provides a fall factor of "0": the retractable device stops the worker's fall.
- 360° rotation, providing total freedom of work.
- It is inserted into a conical tube installed inside the column/wall beforehand.
- It provides a working surface of approximately 125 m², and an action radius of 6.5 m.
- Built-in Energy-absorber device: reduces the forces transmitted in case of an accidental fall.
- Displacement and installation using a crane (80 kg).
- Certified according to EN 795:2012, type B.

■ Frequent uses

- Slab formwork.
- Perimeter construction zones.
- Loading / unloading of trucks.
