

ASTRALPOOL – ALKALINITY ENHANCER

Corrects unstable pH due to low alkalinity

- Avoid pH fluctuations
- Shores up water balance
- Improves bathing comfort

GRANULATED	MEASURING CUP	EFFICACY	ALL TYPES OF POOLS	DOSAGE
		 Immediate		+10ppm 180g / 10m ³

PROPERTIES

Appearance	Crystalline solid
Colour	White
Density	2,2 Kg. 7 dm. ³
Solubility (20°C)	1 Kg. / 10,4 lts. H ₂ O

CHARACTERISTICS

Alkalinity plays an important role because it has a regulating effect on pH and corrects an unstable pH when alkalinity is low.

Powder compound to increase the total alkalinity in the swimming pool water is under 125 ppm. It is essential for ideal water conditions and to avoid a pH imbalance.

INSTRUCTIONS FOR USE

The total alkalinity of water should be between 125 – 150 ppm (CaCO₃), and be checked by a test kit once a week. Pour the necessary dose of product dissolved in water evenly over the swimming pool surface.

DOSAGE

Add 1,8 Kg. of product, to increase 10 ppm the total alkalinity of 100 m³ of water.

These doses are the ones suggested and can be modified according to the own characteristics of every swimming pool, climate, etc.
