

ASTRALPOOL – ALGICIDE

Avoids the formation and development of algae

- With high algicide power
- Rapid action

LIQUID	EFFICACY	ALL TYPES OF POOLS	DOSAGE
			50ml / 10m ³

PROPERTIES

Appearance	Liquid
Colour	Blue
pH (20°C)	5 – 9
Density (20°C)	0,98 – 1,02 g/cm. ³

CHARACTERISTICS

Effective fast-acting quaternary ammonium compound, with a powerful bactericidal, fungicidal and algicidal action, intended for the prevention and elimination of algae.

INSTRUCTIONS FOR USE

Pour the necessary dose of product into a container with water and distribute this solution evenly over the surface of the pool. It will preferably be done at sunset and without the presence of swimmers in the pool.

Periodic disinfection of the pool glass: Before refilling the pool, it is recommended to impregnate the walls and the bottom with a product solution (1 lt. of the product in 10 lts. of water) thus forming a protective film of action disinfectant.

Disinfection of the pool environment: The surfaces that are part of the pool environment can become slippery and can be a vehicle for transmitting diseases. To avoid these inconveniences, we recommend applying a product solution (5 lt. of the product in 10 lt. of water) daily by means of a sprayer or watering can.

After one hour these surfaces should be rinsed with plenty of water.

DOSAGE

Initial Treatment: Add 2 L of product per 100m³ of water.

The Initial treatment should be repeated whenever the water does not appear transparent.

Maintenance Treatment: Add 0,5L for every 100m³ of water once a week.

These doses are the ones suggested and can be modified according to the own characteristics of every swimming pool, climate, etc.
