Technology for clean ponds

MAINSTREAM cleaning ponds

With its strong appearance and optimized technology the MAINSTREAM represents a new direction in the compact class of pond suction cleaners. Sediment, sludge and weed as well as leaves and small stones can be powerfully and continuously sucked up out of a water depth of up to 2.5 meters. The MAINSTREAM separates out the larger materials into a bag-shaped net at the entry to the tank and expels the rest into the discharge hose using the integrated waste water pump. Weighing just 19 kilos, with robust handles and large wheels, the MAINSTREAM is an agile assistant for your pond. Complete and fully equipped, the Mainstream offers you right from the start a tool which can also be used for larger ponds.

MAINSTREAM - a stream like a dream

Technical

data:	<ul style="list-style-type: none"> ▪ Suction capacity ▪ Suction turbine ▪ Waste water pump ▪ Weight ▪ Suction hose and discharge hose 	<p>7000 l/h 1400 Watt 900 Watt 19 kg each 10m / ø 38mm</p>	<p>545,38 € (plus VAT) 649,00 € (incl. VAT) Item MAI1000</p>
--------------	--	--	--

Included in the price:	MAINSTREAM	Suction hose 10 m	Discharge hose 10 m
	Telescopic rod 1.5 m - 4.5 m	TRIFLEX brush	Suction nozzle ø 38 mm

The standard accessory

The universal suction nozzle sucks up coarse dirt in the „main stream“.

The TRIFLEX brush is a completely new concept. The rotatable round corner brushes combined with the flexible side brushes, which follow the contours of the floor, help you to clean more effectively and efficiently.

Discharge hose ø 38 mm, 10 m

The telescopic rod is secured against twisting and can be extended using a press button to various lengths reaching from 1.5 up to an impressive 4.5 meters. The handling is improved by an ergonomic handle and the strengthened profile of the telescopic rod.

Suction nozzle ø 38 mm, 10 m
