

# ASTRALPOOL – ALGISTOP

Removes all kinds of algae

- Fast-acting
- Does not stain

CONCENTRATED LIQUID	EFFICACY	ALL TYPES OF POOLS	DOSAGE
			500ml / 10m <sup>3</sup>

## PROPERTIES

Appearance	Liquid
Colour	Light blue
pH (concentrated at 20°C)	6,5 – 8,5
Density (20°C)	0,95 – 0,05 g/cm. <sup>3</sup>

## CHARACTERISTICS

ASTRAL – 511R Algistop removes all kind of algae, even black.

Effective fast-acting quaternary ammonium compound, with a powerful algicidal action, intended for the prevention and elimination of algae.

Removes all kinds of algae and recommended even for liner and polyester pools (does not stain).

- **Green algae:** This type of algae has a tendency to remain in suspension in the water, giving a green coloration. Also tends to adhere to the entire surface of the vessel.
- **Brown, yellow and red algae:** All have a tendency to adhere to the walls and become entrenched in hard-to-reach areas. The yellow-brown algae usually spread over the entire surface of the pool walls and give a yellowish effect to the pool water.
- **Black algae:** Black algae appear in the form of small isolated spots and are usually located in strategic and often difficult to access points. Traditional treatments are generally ineffective for their elimination.

## INSTRUCTIONS FOR USE

### • Green algae:

1. Dose the necessary amount of product in a container with water, and distribute said solution around the perimeter of the pool.
2. Keep the filtration on for 24 hours.

### • Brown, yellow and red algae:

1. Turn off the filtration system.
2. Locally add the product as close to the walls, undiluted and distributed around the entire perimeter of the pool, and other affected areas.
3. Leave the product for 4 hours and brush.
4. Turn the filtering system back on.

### • Black algae:

1. Turn off the filtration system..
2. Use a brush to vigorously scrape the affected areas. It is very important to break the external protection that the black algae has, so that the product can penetrate inside.
3. Add the product to the affected areas.
4. Leave the product for 24 hours and brush again.
5. Turn the filtering system back on.
6. Repeat the process one week later if there are still traces of black algae. This product should be added when there are no bathers in the pool and at dusk.

## DOSAGE

Add 0,5 lts. of product per 10 m<sup>3</sup> of water depending on the type of algae and its proliferation (7 ppm BAC).

These doses are for guidance only and can be modified depending on the characteristics of each pool, climate, etc.
