

Airfield Lighting

Product Description

IDMAN

IDM 6688

- Base receptacle

Subject to modifications.

SECTION A-A

Base receptacle
IDM 6688

- For 12" luminaires, 8" luminaires with adapter ring IDM 6479
- Cast aluminium construction
- Anodised for excellent corrosion protection and maximal adhesion of fixing compounds

- Replaceable thread elements with locking feature
- Weight 5.7 kg

- Two possible Pg16 cable entries on side. Optionally equipped with bottom hole \varnothing 130 mm. Please specify when ordering.

Check in to the future

How many aircraft can your airport handle today? Can this number be increased without adverse effects on the airport's safety level? It is a known fact that traffic volume will rise in the foreseeable future. More movements will demand monitoring of the entire airport. Requirements will be sharpened and the development of an integrated system controlling not

only ground movements but also air traffic close to the airport is of the highest interest. The International Civil Aviation Organization (ICAO) already describes A-SMGCS, Advanced Surface Movement Guidance and Control System, as the answer to the future modern airport need to control the entire airport space in one superior system.

To a larger extent than today's systems, A-SMGCS will rely on automated processes to give both pilots and traffic controllers exact information about positions and directions. Safegate Group delivers complete A-SMGCS solutions already, as well as all vital parts relating to it. Safegate Group can check your airport into the future – today!
